

WHO WE ARE

OLD SCHOOL WORKMANSHIP, TAUGHT AND HANDED ON

Plant Wide Services started with an idea that has not changed since: bring back the old school contractor workmanship this corridor was built on, and run a company that treats the trades as a craft worth teaching.

The company hires for aptitude and trains its own employees in their trades, so electricians and instrument technicians learn the whole job instead of one narrow piece of it. Quality work is acknowledged rather than merely invoiced.

From our jobs: a unit going up under a lattice-boom crane.

**ONE CONTRACTOR ANSWERS FOR BOTH
SIDES OF THE WORK: THE ELECTRICAL
POWER SYSTEMS AND THE
INSTRUMENTATION LOOPS.**

FACILITIES WE WORK IN

Refining · Chemical · Oil & gas · Tank farms and terminals

SERVICE AREA

Houston · Pasadena · Deer Park · La Porte, Texas

is all it takes to start.

ELECTRICAL & INSTRUMENTATION CONTRACTOR

PLANT WIDE ELECTRICAL AND INSTRUMENTATION.

Working inside refining, chemical and oil & gas plants, and on the tank farms and terminals along the Houston Ship Channel.

SUBSTATION & SWITCHGEAR

MOTORS

INSTRUMENTATION & CONTROLS

TANK FARMS & TERMINALS

832-600-9074

PlantWideservices.com

WHAT WE ARE CALLED FOR

01 • ELECTRICAL

SUBSTATION & SWITCHGEAR

High-voltage work from the utility tie through the unit, and the grounding and commissioning support that follows.

- Substation & switchgear installation
- Transformer setting & connections
- Breaker & protective device work
- Bus and high-voltage terminations
- Grounding grid & bonding
- Energization support

02 • ELECTRICAL

MOTOR INSTALLATION & REPLACEMENT

Motors pulled, set and landed as a planned job, with the checks done before the unit is handed back.

- Motor removal & replacement
- Rigging with millwright coordination
- Motor termination & cable installation
- MCC bucket & starter work
- Raceway and conduit to the motor
- Rotation, megger & circuit checks

Electrical and instrumentation work scoped as one job, by crews that read the loop drawings and the single lines.

03 • INSTRUMENTATION

INSTRUMENTATION & CONTROLS

The field side of instrumentation and control, with calibration records that hold up to an audit.

- Transmitter & switch installation
- Control valve & positioner setup
- Loop checks & I/O checkout
- PLC and DCS field support
- Calibration records (as-found / as-left)
- Loop folders & as-built drawings

04 • ELECTRICAL + I&E

TANK FARMS & TERMINALS

Electrical and instrumentation work on the tanks, at the pump stations and out in the yard.

- Motor and pump installation & replacement
- Tank level and instrumentation work
- Loop checked and documented
- Switchgear and motor control work
- Grounding, bonding and cable tray
- Yard and area lighting

FROM JOB WALK TO TURNOVER

01 SCOPE

Walk the job with your team. Review drawings, tag numbers and existing conditions, then agree where our work starts and ends.

02 PLAN

Crew size, materials, permits and schedule built around your unit constraints.

03 EXECUTE

Field work by electrical and instrumentation crews with supervision on site, and a daily report on what moved.

04 VERIFY

Loop checks, testing and commissioning support. Closeout documents, marked drawings and punch list handed over at turnover.

SAFETY & COMPLIANCE

NOBODY GETS HURT ON OUR JOB

Pre-job hazard analysis. Every job starts with a JSA and a field-level briefing with the crew that will do the work.

Lockout / tagout discipline. LOTO planned with your operations group before a single conductor is landed or a loop is broken.

Permit coordination. Work permits, hot work, confined space and gas-test requirements handled with your EHS and operations teams.

WHAT WE HAND YOUR CONTRACTOR GROUP

- Certificate of insurance
- W-9 and company information
- Written safety program
- Site orientation and badges
- TWIC and terminal access
- Bid and qualification packages
