

ONE CONTRACTOR FOR THE POWER SIDE **AND** THE LOOP SIDE.

Our crews work inside operating units in the refining, chemical and oil & gas facilities along the Houston Ship Channel, and on the tank farms and terminals on the same corridor.

TRADES
Electrical + I&E

SECTORS
Refining • Chemical • Oil & gas

FACILITIES
Refineries • Terminals • Tank farms

TERRITORY
Houston • Pasadena • Deer Park • La Porte

WHAT WE DO

ELECTRICAL, AND INSTRUMENTATION

ELECTRICAL

- Substations, switchgear and transformers
- Motor control centers and starters
- Motor installation, replacement and alignment support
- Cable tray, conduit and raceway
- Feeder terminations and cable pulls
- Tank farm, terminal and loading rack electrical
- Heat trace installation and repair
- Lighting, power distribution, grounding and bonding

INSTRUMENTATION & CONTROLS

- Transmitters, switches and analyzers
- Control valves and positioners
- Loop checks from field device to control system
- PLC / DCS I/O checkout and field support
- Control panel assembly and modification
- Calibration with as-found and as-left records
- Loop folders, marked drawings and as-builts

WHY PLANTS CALL US

A PLANT CONTRACTOR, NOT A SERVICE CALL

01

WE WALK IT BEFORE WE PRICE IT

A scope taken off a description is a guess. We look at what is actually installed and price against that, inside your permit and access constraints.

03

ONE SUPERVISION CHAIN

Electrical and instrumentation crews on the same unit under supervision that is on site, so a question gets answered at the equipment.

02

CRAFT, NOT HEADCOUNT

We run our own crews and our own test gear. The people who show up at your gate are ours, under our supervision.

04

THE PAPERWORK IS PART OF THE JOB

Loop folders, calibration records, marked drawings and punch lists are turned over at the end.

SAFETY & COMPLIANCE

NOBODY GETS HURT ON OUR JOB

Pre-job hazard analysis. Every job starts with a JSA and a field-level job briefing with the crew that will do the work.

Lockout / tagout discipline. LOTO planning with your operations group before a single conductor is landed or a loop is broken.

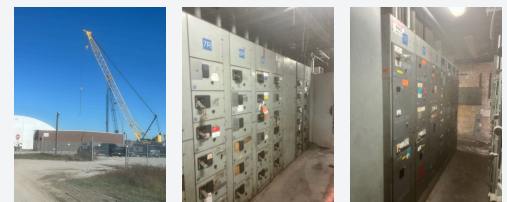

Permit coordination. Work permits, hot work, confined space and gas-test requirements handled with your EHS and operations teams.

Documented closeout. Job walks, daily reports and turnover documentation so your records match what was installed.

WHAT WE HAND YOUR CONTRACTOR GROUP

- Certificate of insurance
- W-9 and company information
- Written safety program and JSA/JHA process
- Site orientation, badges and gate access
- TWIC and terminal access
- Bid and qualification packages

FROM OUR JOBS

A unit going up under a crane • A switchgear line-up landed and terminated • A 480 volt room ready to be energized
